

POINTING DOMAIN INTO SHOPIFY

1

Log into your Shopify account, make sure that you have entered the correct details.

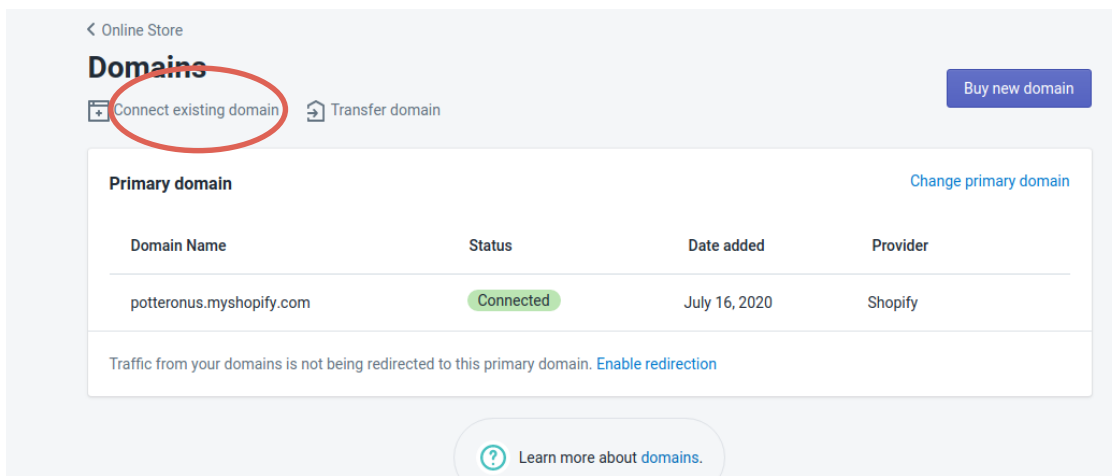

2

Once you're on the Admin Dashboard of Shopify, go to Online Store > Domains.

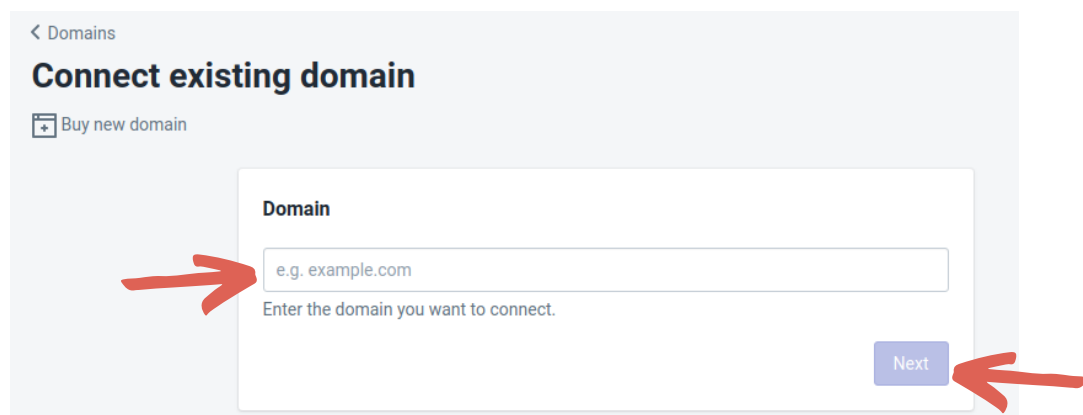

3

Click on Connect Existing domain.

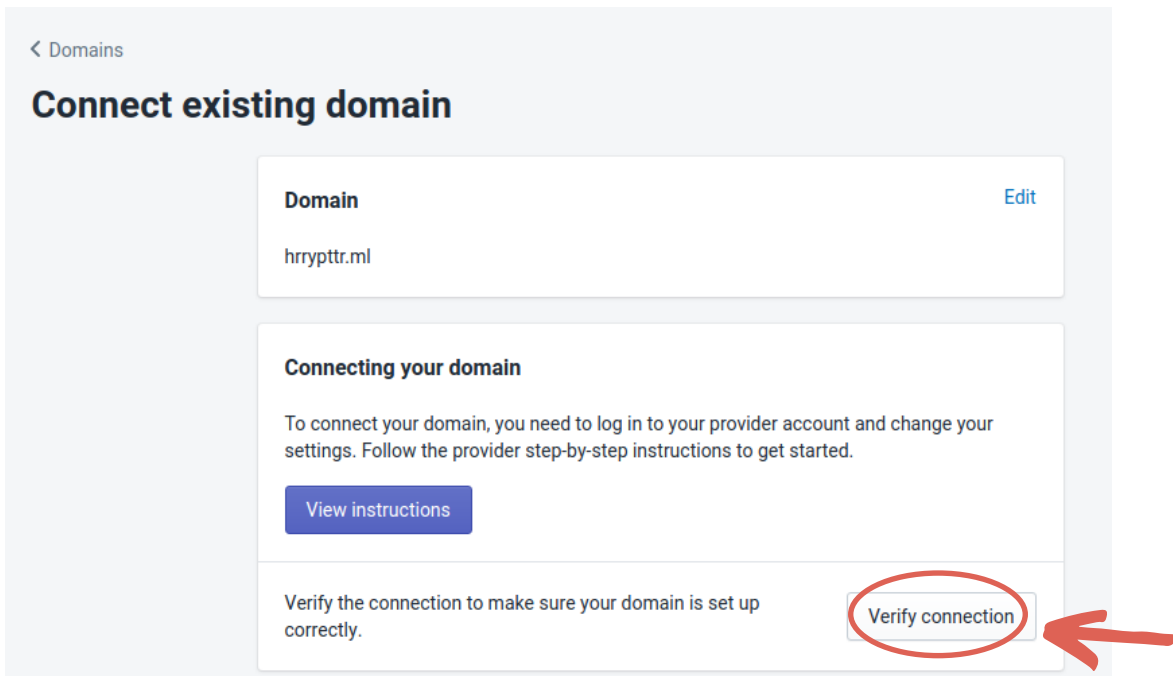

4

Enter the domain you wish to import in Shopify, make sure that the domain is existing. Click the 'Next' button.

5

If the domain successfully read by Shopify, you need to view the instruction of the new DNS configuration.

6

You need to log into your account to be able to modify the A and CNAME records of your domain.

1

On your cPanel Account

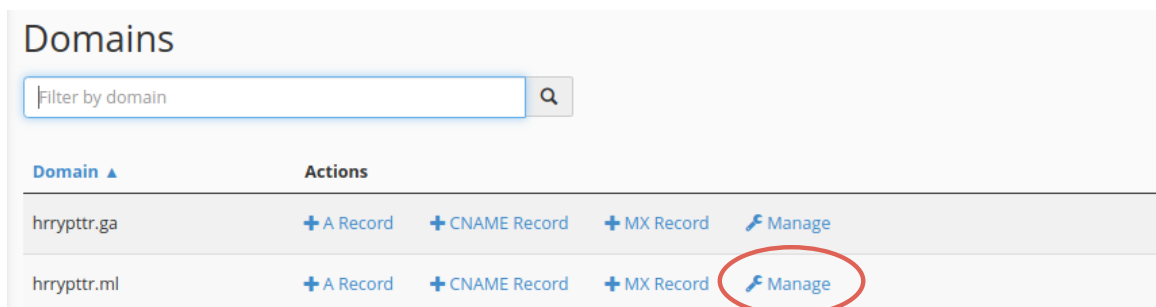

You need to log into your cPanel account, make sure to input the correct login details.

2

On your cPanel Dashboard, go to Zone Editor, this tool will help you to make changes into your DNS Zones.

3

Along the section of Zone Editor, check on the list and click on "Manage".

4

Modify the A records and change it according to the record provided by the Shopify as well as the CNAME records.

Zone Editor

DNS converts domain names into computer-readable IP addresses. DNS zone files configure domain names to the correct IP addresses. This feature allows you to create and edit these zone files. For more information, read the [documentation](#).
